## ORIGIN

**SOURCE**  
25X1X6

1. An experimental V-weapon plant is operating under the cover name "Steinbruch-verwertung Lehesten" under Russian supervision. The installation is located six km outside of Lehesten and employs most of the German personnel formerly employed there under the Nazis. It is rumored that the plant is to be transferred to Russia.
2. Among the material found by the Russians at Telefunken were construction plans for a certain type of guided anti-aircraft shells. These shells are exploded through remote control in the vicinity of approaching aircraft. The Gema Telefunken group located in the Gema building at Berlin-Köpenick has now begun with the construction stage of these shells. There is a proving ground, the exact location of which cannot be given. It is believed to be in the vicinity of Köpenick.

This document is hereby regraded to  
**CONFIDENTIAL** in accordance with the  
letter of 16 October 1973 from the  
Director of Central Intelligence to the
